

Genentech

IN BUSINESS FOR LIFE

Genentech, the world's first biopharmaceutical company, leads the industry in applying high-quality innovative science and technology to the development of important new drugs that continue to revolutionize the field of medicine. A major player in the company's success is its Process Development operation, long recognized as a world leader in developing large-scale manufacturing processes, analytical methods and drug delivery systems for use at facilities in the U.S. and overseas.

Post Doctoral opportunity - # 04-1000004075

Late Stage Pharmaceutical Development and Technology at Genentech has an open Post-Doctoral position available to evaluate different biophysical technologies for analyzing protein aggregation, including light scattering, field flow fractionation and analytical ultracentrifugation. This position requires a Ph.D. in Biophysical Chemistry or related field associated with biophysical analysis of proteins. Experience with analytical ultracentrifugation for analysis of protein aggregation is also highly desirable.
