

16th Symposium Analytical Ultracentrifugation

March 1st and 2nd 2007

Hannover Medical School, Germany

Analytical Ultracentrifugation has become a major tool for the characterization of macromolecules and macromolecular assemblies.

We invite all scientists working in the field of macromolecules, either from biology or chemistry or from other backgrounds to participate in the

16th International Symposium Analytical Ultracentrifugation

The symposium will bring together physicists, chemists and biologists from the fields of molecular biology, macromolecular chemistry and nanoscale particles for a fruitful exchange of their concepts and ideas. We especially invite novices in the field to participate in this exchange. The symposium is also aimed at promoting the development of the technique and its interpretative tools. A satellite workshop (February 27th and 28th 2007, Hannover) will complement this goal.

The symposium will present talks and posters organized in the areas of:

Biology
Non-biological macromolecules and nanoparticles
Instrumentation and interpretation
Hydrodynamics
Other systems

The Symposium is jointly organized by the Studiengruppe "Biophysical Chemistry" of the German "Gesellschaft für Molekularbiologie und Biochemie"

The symposium will be free of charge but registration is required. Proceedings of the symposium will be published in "Progress of Colloid and Polymer Science"

On behalf of the organizers:

Claus Urbanke and Ute Curth
